

TECHNICAL INFORMATION

ULTIPATCH EDGEMASTER

Product Data Sheet

DESCRIPTION

Ultipatch Edgemaster is an emulsion based bituminous sealant & tack-coat aerosol spray that has been designed to complement Tarmac's Permanent Cold Lay Surfacing Material's (PCSM's) **Ultipatch Pothole** and **Ultipatch Footway**.

USES

Ultipatch Edgemaster should be applied to the vertical edges and base of the excavation, directly before the application of **Ultipatch Pothole** or **Ultipatch Footway**.

Ultipatch Edgemaster will increase the bond strength of the macadam material to the substrate, whilst simultaneously acting to waterproof the application area – these two key properties of **Ultipatch Edgemaster** help to improve the macadam's overall performance through preventing water ingress and subsequent freeze / thaw damage which helps to create a long lasting permanent repair.

Ultipatch Edgemaster should be hand applied directly from the can and will promote a strong bond to ironwork, concrete and bituminous substrates.

BENEFITS

- Waterproof
- Can be applied in all weathers
- Easy to use
- Seals cracks instantly
- Provides a durable, long lasting finish.

PREPARATION

All substrates must be clean and free from laitance, dust and loose particles. All traces of contamination, such as oils, grease and chemicals should be removed.

Ultipatch Edgemaster can be applied to wet, damp or dry substrates.

APPLICATION

Shake the can vigorously by hand for 30 seconds before use. Invert the can, pointing the nozzle towards the application area and press the spray button. Cover the area evenly using long strokes from a distance of 200mm. Cover vertical edges first before moving onto the base of the reinstatement area.

CLEANING

Directly after use point can upwards and spray for 2 seconds to clear the nozzle, take care not to spray towards yourself or into the wind. Failure to clean the nozzle after use can result in the can becoming blocked rendering the remaining product unusable.
